

## Eleotin (Item #8131)

*Herbal Combination for A Healthier Pancreas*

---

### What is Eleotin?

Eleotin is a combination of dried roots, stems, fruits and leaves from various herbal plants, all found in nature. Many of these plants are originally from Asia. Eleotin assists the body's natural ability to control blood glucose levels.

### What are the three different blends of Eleotin? (Provided with each monthly unit)

- **Morning blend:** works by increasing insulin production from the pancreas and delaying the breakdown of carbohydrates into glucose. The Morning blend is also a good natural source of fiber and aids in healthy digestion.
- **Afternoon blend:** improves the health of insulin receptors so that glucose is more efficiently absorbed into the liver cells. The Afternoon blend also cleanses the blood system by acting as a mild diuretic.
- **Evening blend:** provides rich essential nutrients that strengthen the pancreas, resulting in long-term benefits. The Evening blend is also designed to help individuals sleep better.

### When will I see results from Eleotin?

For mild diabetics, results begin to show within two to three months from the start of usage. For moderate to severe diabetics, results begin to show within four to six months. To receive the full benefits of Eleotin, it is important to continue use for 9-12 months.

### What is the recommended serving of Eleotin?

Eleotin should be taken with eight ounces of water, three times per day.

- *Morning:* one morning capsule with breakfast.
- *Afternoon:* one afternoon capsule between lunch and dinner on an empty stomach.
- *Evening:* one evening capsule after dinner about one hour before bedtime.

Please monitor your Hemoglobin A1C and plasma insulin as well as Blood Glucose Level. A change in these numbers will indicate fundamental change, rather than temporary change. Consult your physician regarding these measurements.

*You may want to double the dosage of Eleotin if any of the following apply:*

- You have not experienced a drop in your blood glucose levels in the above-mentioned length of time;
- You are above average weight;
- You have had diabetes for more than 6 years.

**Maintenance Mode:** After your 9-12 month protocol of Eleotin and you have achieved reduced and stable blood glucose levels, you may want to begin taking one Sweet Balance vegi-cap with each meal (as in, three per day; please see our "Sweet Balance" Item #4023 data sheet.)

### **What are some of the advantages of taking Eleotin?**

- ✓ While people often experience side effects from or develop resistance to the various hypoglycemic agents commonly used for diabetes, the use of Eleotin demonstrates neither the development of resistance, nor the experience of side effects.
- ✓ General health and energy level improvement; Eleotin can help with more peaceful and comfortable sleep, less frequent urination and healthier skin, amongst other examples.
- ✓ Eleotin can be taken in conjunction with prescription medicine.
- ✓ Eleotin's beneficial effects can last for long periods of time, as in, years after usage termination. Chemical agents only have temporary control on blood glucose levels.

### **What tests have been conducted on Eleotin?**

Eleotin has been scientifically tested at the JMDRC in Calgary. Animal testing was conducted to demonstrate the efficacy, safety and probable modes of action. Compassionate human tests were then performed on Type II diabetics to test the effect of Eleotin on severely diabetic subjects. Finally, animal and human tests were conducted to measure whether Eleotin's glucose-lowering benefits remained present after the treatment was terminated.

#### **Results from Animal testing:**

- ✓ Eleotin increases secretion of insulin from the pancreas;
- ✓ Eleotin inhibits breakdown of carbohydrates to delay the quick release of sugar after a meal;
- ✓ Eleotin increases insulin binding by up-regulating the insulin receptors of various cells

#### **Results from Human testing:**

- ✓ Eleotin is an effective treatment in maintaining healthy blood sugar levels in Type II diabetics.
- ✓ After 4-8 months of taking Eleotin, 70% of test subjects' Blood Glucose Levels were reduced to near normal levels no longer requiring insulin treatments.
- ✓ 3 months after terminating usage of Eleotin, subjects' Blood Glucose Levels remained constant.

### **Other Important Information:**

As with any supplement, achieving the best results from Eleotin may require a change in lifestyle. Keeping an extremely healthy diet, exercising the body and mind, limiting alcohol intake, avoiding cigarette smoke, and using supplements are just a few ways to improve overall health.
